Re: Permit Amendment
Permit Number: 7711A
Asphalt Roofing Materials Manufacturing Facility
Dallas, Dallas County
Account Number: DB-0378-S

Dear Mr. Stephens:

We have previously notified you by letter, dated February 27, 2001, that your application for renewal of Permit Number 7711A is deficient and additional information was requested. You have not adequately responded to this request. You applied for the required amendment but you have not agreed to publish notice that is required for the amendment. An authorization for public notice for your amendment will be sent to you separately. If you do not meet the scheduled dates as required by that public notice authorization, then you will receive a letter that requires the completed public notice information within 15 days in order to prevent a show cause hearing being instituted.

We received the above-referenced amendment application, Form PI-1, dated July 18, 2001. We subsequently determined December 12, 2001 in a meeting with GAF representatives, including yourself, that you would stack test the emissions from your water-cooled line sections to verify your belief that these increased emissions are less than 5 tons per year (tpy). You represented them at 8.85 tpy in the referenced application which requires public notice. You represented at the meeting that the test would be accomplished in March 2002. We have received no information from you concerning this testing. Under separate cover, a public notice authorization will be sent to you. If you do not meet the date requirements in the public notice authorization, this permit application will be voided.

Also, please note that Texas Natural Resource Conservation Commission (TNRCC) has an Internet site that has proven helpful to many air permit applicants. The site includes New Source Review Permits forms, tables, guidance documents, and state air regulations. The address is

http://www.tnrcc.state.tx.us/permitting/airperm/nsr_permits/nsrhome.htm.

After receipt of all the additional information, we will continue the review of your application. If the information furnished in response to this notice results in the need for further clarification or additional information, we will communicate that need as soon as possible. You are reminded that Title 30 Texas Administrative Code Section 116.116(a) states that all representations made in a permit application become conditions upon which a permit is issued. Any variations from these representations require prior authorization from the TNRCC.

Failure to submit all the requested information within the public notice time frame will result in the voidance of your application. Following a voidance, your application and supporting data, as well as any fees submitted, will be retained for 180 days. To reactivate the voided application, please submit a new PI-1 application form and a new public notice authorization will be mailed to you. Additional fees need not be submitted if the project scope has not increased and the original fee was correct. If all these conditions are not satisfied within 180 days from the date of the voidance, your application will automatically be denied and the entire application, including the appropriate fee, must be resubmitted if you desire to pursue the project.

Thank you for your cooperation in this matter. If you have any questions, please call me at (512) 239-1351, or write to me at Texas Natural Resource Conservation Commission, Office of Permitting, Remediation, and Registration, Air Permits Division (MC-162), P.O. Box 13087, Austin, Texas 78711-3087.

Sincerely,

Earl J. Jones, P.E.
Air Permits Division
